DETAILED ACTION

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In the claims:

45. (Currently amended) The wireless communication apparatus of [any of claims] claim 35 wherein said processing component is configured to determine a difference by determining an error between normalized blocks of the columns or rows.

Allowable Subject Matter

2. Claims 1-47 are allowed.

Reasons for Allowance

3. The following is an examiner's statement of reasons for allowance.
The prior art does not teach or fairly suggest the following:

A method for detecting data in a wireless communication system, the method comprising:

receiving a plurality of communication signals;

modeling a solution for estimating data of the received communication signals using a linear system requiring a matrix inversion;

determining columns or rows of an approximate Cholesky factor; determining a difference between the determined columns or rows;

if the determined difference is less than a threshold, determining subsequent columns or rows by repeating previously determined columns or rows;

estimating the data of the received communication signals using the approximate Cholesky factor; and

using the data estimate to detect data received on a plurality of received communications channels, as specified in claims 1 and 24.

A wireless communication apparatus configured to receive a plurality of communication signals comprising:

a data estimation component configured to estimate data of the received communication signals using a linear system requiring a matrix inversion and an approximate Cholesky factor;

a processing component configured to determine columns or rows of the approximate Cholesky factor;

said processing component configured to determine a first block of a new column or row after determining a non-replicated prior column or row; and

said processing component configured to determine a difference between the first block of the new column or row and a corresponding first block of the prior determined column or row and, if the determined difference is less than a threshold, to determine subsequent blocks of the new column or row by replication of corresponding blocks of the prior determined column, as specified in claims 12, 18, 25, 46 and 47.

The closest prior art, either singularly or in combination, fails to anticipate or render the above limitations obvious.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Albert T. Chou whose telephone number is 571-272-6045. The examiner can normally be reached on 8:30 - 17:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Chi H. Pham, can be reached on 571-272-3179. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
